Cameron DeBough

Tucson, AZ · (520) 861-8697 · cameron.debough@gmail.com · linkedin.com/in/camerondebough · github.com/CameronDeb · camerondebough.com

EDUCATION

University of Arizona, B.S. Computer Science & Artificial Intelligence, Minor in Mathematics **Expected May 2029**
GPA: 3.87 · 67 Credits Completed
Honors: Dean's List with Distinction (Fall 2025) · Dean's List (Spring 2026) · Undergraduate Research Travel Grant, $1,000 (Fall 2026)
Coursework: Software Development, Discrete Mathematics for CS I-II, Analyzing Data, Web Programming, Calculus I-II, Linear Algebra

EXPERIENCE

Founder & Engineer, DeBough Systems (deboughsystems.com) **August 2026 - Present**
- Built and launched a cybersecurity service that helps small businesses with no IT staff find and fix the weak spots attackers target most, with every issue explained in plain English
- Wrote a read-only checkup program that scans each company computer in about 40 seconds (updates, antivirus, firewall, disk encryption) and turns the results into a ranked fix list, a weekly email report, and a printable report for cyber insurers
- Built a free domain scan that checks whether attackers could fake a company's email or impersonate it with look-alike websites; Next.js, TypeScript, Supabase/Postgres, and Stripe, with rate limiting and ownership checks to prevent misuse

Research Software Engineer, NewFOS Center, University of Arizona **March 2026 - Present**
New Frontiers of Sound, an NSF Science & Technology Center
- Built Python automation pipelines for nonlinear acoustics experiments (hysteresis sweeps, harmonic SNR analysis, transfer-function extraction) used to model signal distortion in acoustic transducers
- Designed and validated an electrical impedance measurement rig with a full de-embedding pipeline that isolated a 42% cable-parasitic error in a previously reported measurement
- Developed MATLAB signal-analysis pipelines (SVD, dynamic mode decomposition) that produced publication-quality figures for experiments on a three-rod coupled acoustic waveguide
- Automated Tektronix oscilloscopes and function generators via VISA/SCPI for synchronized multi-channel data acquisition

Undergraduate Research Assistant, VSI Lab, University of Arizona ECE **September 2025 - Present**
Embodied AI & Accessibility · Advisor: Prof. Eungjoo Lee
- Led a real-robot study comparing online Gaussian Splatting SLAM to offline COLMAP/GLOMAP mapping on a TurtleBot 4; corrected an 11-13% depth camera bias using lidar, cutting tracking error from 7.4 cm to 1.2 cm
- Building NVIDIA Isaac Sim environments for robot inspection with ROS 2 control of LeRobot SO-101 arms
- Building computer-vision pipelines for Meta Aria 2 smart glasses (hand tracking, gaze data, real-time on-device ML inference) for ASL accessibility and skill-assessment applications

Software Engineering Intern, SkillfullyAware / SAAQ **October 2025 - October 2026**
- Owned the production backend of an AI-powered leadership assessment platform used by executive peer organizations (EO, YPO): Python and FastAPI services on Supabase (PostgreSQL), live in production
- Built a streaming LLM analysis pipeline with multi-stage scoring and two-pass generation that eliminated timeouts and truncated output, plus automated DOCX report generation from the analysis results
- Worked on authentication, Stripe payments, and persistent user storage for the MVP launch

TECHNICAL PROJECTS

APEX QUANT, Algorithmic Futures Trading System
- Architected event-driven backtesting and paper-trading engine for micro futures (MES/MNQ/MGC) with modular strategy framework, risk management controls, and a broker-integration layer targeting Interactive Brokers (ib_insync)

Thermal-Tracking Turret, Embedded Systems / Robotics
- Built an autonomous heat-tracking pan/tilt turret on Raspberry Pi: AMG8833 8×8 thermal array over I2C, PCA9685 hardware PWM servo control, and a closed-loop feedback algorithm that centers a moving heat source in real time, deployed as a headless systemd service

Synapse Finance, Full-Stack Financial SaaS Platform
- Shipped production app with 50+ active users: Flask, React, PostgreSQL, JWT authentication, RESTful APIs, and CI/CD

PRESENTATIONS

DeBough, C., Koh, W., Lee, E. "Online Gaussian Splatting SLAM on a TurtleBot4: Real-Robot Evaluation Against Offline Structure-from-Motion." Poster, *Bay Area Robotics Symposium (BARS)*, UC Berkeley, October 2026

TECHNICAL SKILLS

Languages: Python, C++, Java, JavaScript/TypeScript, SQL, MATLAB, Bash, HTML/CSS
Frameworks: FastAPI, Flask, React, Next.js, Node.js, Tailwind CSS
Embedded & Hardware: Raspberry Pi, I2C sensors, PWM servo control, VISA/SCPI instrument automation, ROS 2
AI & Data: Agentic AI (tool calling, multi-step agents, RAG), LLM integration, computer vision, NumPy, SciPy, Pandas, signal processing
Tools & Databases: Git, Docker, Linux, PostgreSQL, Supabase, Stripe, CI/CD

LEADERSHIP & ACTIVITIES

Coke Fellow, The Coca-Cola Company, Introships Career Discovery Program **May - July 2026**
- Selected as 1 of 50 fellows nationwide for a coached cohort program with Coca-Cola executives

Founder & Owner, Durian Car Detailing **May 2023 - Present**
- Built and run a car detailing business from scratch with 200+ jobs completed, handling pricing, marketing, and customer service

University of Arizona AI Club · MLH Global Hack Week · 13+ GitHub projects
